Kegan Myers

call: 314-467-0179   email: kegan@keganmyers.com

Summary

I am an experienced DevOps Engineer with expertise in cloud technologies, Kubernetes, CI/CD, and software delivery. I have a proven track record of designing and implementing solutions in both start-up and enterprise environments. I am passionate about collaborating with development teams to deliver high-quality software incorporating DevOps best practices.

Key Skills

Ops: Cloud (AWS, GCP, Azure, etc), Terraform, Kubernetes, Containers, Bash, Treafik, Nginx, CI/CD (GH Actions, Gitlab CI, Jenkins), Ansible, Prometheus, ELK, Linux (Ubuntu)
Dev: Javascript (Node.js, Express, React, Svelte), Go (Echo), Redis, SQL (Postgres), HTML

Working Experience

TLite, LLC - Founder   January 2024 - Present

An app that combines emerging LLM and traditional MTL techniques to make translating text easier and more accurate than ever before.

WWT - Sr. DevOps Engineer   January 2022 - November 2023

Design and architect infrastructure and software delivery pipelines in collaboration with development teams. Provide leadership in implementing DevOps best practices.
- Worked with a startup to prototype and operationalize a suite of cloud and edge software utilizing novel machine learning.
- Worked with a large multinational to modernize their CI/CD processes.

WWT - DevOps Engineer   March 2021 - January 2022

Work with cross-functional delivery teams to reliably deliver quality software.
- Helped teams deliver software more consistently through containerization.

WWT - Platform Engineer   December 2019 - March 2021

Operationalize container platforms to enable DevOps practices on teams of all sizes.
- Worked with partners to deliver software platforms such as PKS, OpenShift, and more.

WWT Asynchrony Labs - Delivery Engineer   January 2018 - December 2019

Enable teams to develop and deliver better and faster through applying DevOps methodologies and technologies as well as my software development background.
- Jump-started teams with CI/CD and containerized deployments.
- Helped architect and deploy hybrid cloud/edge software stack.

WWT Asynchrony Labs - Developer
August 2016 - December 2017

Develop and deliver quality software into production environments.
● Delivered high quality applications using React, Redux, Express, and more.
● Automated deployment of Rancher 1.x environments and apps hosted in AWS.

terrible.solutions LLC - Owner
April 2016 - August 2016

Provide boutique software consulting to early stage startups.

The LaunchCode Foundation - Developer
December 2014 - April 2016

Power job and education initiatives across the United States.
● Developed a custom CRM, and migrated backing data to MySQL from Google Sheets.
● Built and maintained cloud infrastructure, saving thousands vs. AWS annually.

Pushup Social - Developer
September 2013 - November 2014

Develop a prototype personal social network into a product ready for sale.
● Migrated server-side code to single page application in TypeScript and knockout.js.
● Maintained API microservices and re-wrote image processing service using node.js.

Cybercon - SMC Staff
May 2012 - June 2013

Provide frontline support for cloud and colocation services in a datacenter environment.

Volunteer

Code Until Dawn - Organizer
June 2014 - October 2016

A monthly meetup with over 1,000 members that promotes the coding community in St. Louis through a monthly social event with an informal atmosphere in which we actually "Code Until Dawn".

CodeCause - Co-Founder
July 2014 - November 2014

An organization aiming to provide novice coders with real-world experience, and to use their skills and passion to do good for their community.

LaunchCode CS50x - Mentor
January 2014 - April 2014

LaunchCode's first educational program, which helped over 100 people learn to code using Harvard's CS50x curriculum.
● Create and deliver introductory-level talks on web technologies including NoSQL databases and node.js.
